

Continental LifeCycle™

Retreaded super elastic tyres for
a cleaner environment

- ▶ A retreaded super elastic tyre
- ▶ Second life for Continental casings
- ▶ Reduces energy and raw materials used in manufacturing
- ▶ 65% of original tyre material re-used

The Continental LifeCycle tyre is a retreaded solid rubber tyre using Continental premium casings. By reusing 65% of the original tyre material this enables us to use the highest quality compounds in the new tread. In addition with a recycled premium tyre you get proven technology and the performance expected of a leading brand. The Continental LifeCycle tyre is the perfect solution for operators with light forklift usage looking for quality at an affordable price.

LifeCycle only uses Continental casings which are subjected to exhaustive, standardised quality controls. Following these checks, the tread is removed from the casing and completely replaced, using materials identical to those used in the production of new tyres. This way the retreaded tyre achieves the highest possible quality standards.
